Hello again.

In addition to the story done in May on Vermont Public Radio, Erin Mansfield also published a story in [VTdigger in May](#), where Chris you said that the state stopped purchasing flu shots with thimerosal.

However, we have verified with the vermont state employees flu clinic coordinator that the majority of the shots that are to be given starting October 4th do contain thimerosal. Folks who have called the hotline have been told that, unless you say you are allergic, pregnant or nursing, the shots will have thimerosal in them.

The 2017 Flu\_FAQ booklet is attached.
